

Bátatom Ltd. was formed at 2001. as a firm of a project in Mecsekérc Zrt. Its main profil (2001-2007) was the researching in order to place a depot contains the radioactive wastes from the Nuclear Power Plant.

The company went through a considerable change in the past years and his scope of activity was renewed radically.

Our main activities:

Research for renewable energy sources, deal with its projects, management. An example could be the utilization of thermal water (in a concait spa and a housing). We have worked out a detailed map contains the state of natural souches, possibilities etc.

Renovation of the oily pools in NPP

Form a research centre to coordinate the geological researches with an environment protection aim

General implementation (e.g. a 16 flats social house in Pécs)

Development of systems with solar cells
